

Educational Trip to the Botanical Garden, Gauhati University on 12/04/2019

The educational trip to the Botanical Garden at Gauhati University was organized for the 2nd semester major students of the department on 12th April 2019. This excursion aimed to provide students with a practical understanding of plant diversity, botanical research, and conservation efforts within a botanical garden setting.

Students embarked on a guided tour of the Botanical Garden, led by experienced botanists and garden staff. They explored the garden's diverse plant collections, including native and exotic species, medicinal plants, orchids, ferns, and aquatic plants, gaining insights into their morphology, habitats, and ecological significance. Nature walks and observation sessions allowed students to explore different sections of the Botanical Garden independently, observe plant-insect interactions, and appreciate the ecological relationships within the garden's ecosystems.
